DATE MAILED: 11/16/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)
	10/629,975	BOONE ET AL.
	Examiner	Art Unit
	Lisa V. Cook	1641

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1) Responsive to communication(s) filed on 17 October 2005.
 2a) This action is FINAL. 2b) This action is non-final.
 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4) Claim(s) 1-6 is/are pending in the application.
 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
 5) Claim(s) _____ is/are allowed.
 6) Claim(s) 1-6 is/are rejected.
 7) Claim(s) _____ is/are objected to.
 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9) The specification is objected to by the Examiner.
 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 a) All b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) Notice of References Cited (PTO-892)
 2) Notice of Draftsperson's Patent Drawing Review (PTO-948)
 3) Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
 Paper No(s)/Mail Date _____

4) Interview Summary (PTO-413)
 Paper No(s)/Mail Date. _____

5) Notice of Informal Patent Application (PTO-152)
 6) Other: _____

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/17/05 has been entered.

2. Rejections and/or objections of record not reiterated herein are withdrawn.
3. Claims 1-6 are pending and under consideration.

NEW GROUNDS OF REJECTION NECESSITATED BY AMENDMENT

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

- I. Claim 6 is rejected under 35 U.S.C. 102(b) as being anticipated by Sugi et al. (The American Journal of Gastroenterology, Vol.91, No.5, 927-934, 1996).

Sugi et al. disclose that lactoferrin (LF) levels were elevated in fecal samples of patients with inflammatory bowel disease. See abstract. The ELISA assay procedure is disclosed on page 928. LF elevation was seen in various disease states.

Sugi et al. measure multiple samples at different times (1st and 2nd samples wherein the second sample concentration is measured at a time later than the first sample measurement). In particular the multiple sampling analysis is seen on page 929 in figure 2 for example. LF concentrations are measured at different time intervals, which include 24hours, 48hours, 72hours, and 96hours. The LF concentrations are subsequently compared to each other in figure 2 – A, B, and C (48hrs – 72hours –96 hours are all later than the first 24hour LF detection).

Response to Arguments

Applicant contends that Sugi et al. do not describe each and every element set forth in the rejected claims.

Specifically applicant argues that Sugi et al. teach a method of reading the same fecal sample at a first time and a second time, while the instant method detects different samples at a first and second time. This argument was carefully considered but not found persuasive because

Sugi et al. teach samples collected from the same patient (UC and CD) at two or more times (see page 928 2nd column 1st paragraph). The samples were also collection from different samples (from various patients) at times varying from 48 to 72 hours (the samples are not all the same). See page 928 1st column last paragraph –Subjects to 2nd column 2nd paragraph – Method of stool collection. The samples are collected independently but are compared to each other in order to evaluate differences there between in figure 3 for example.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

II. Claims 1-3 are rejected under 35 U.S.C.103(a) as being unpatentable over Uchida et al. (US Patent #5,552,292) in view of Boy Hoeyer (Dansk Kemi, 1994, 75(5), pages 26-28-Abstrcat Only).

Uchida et al. teach methods to measure lactoferrin in fecal samples. Lactoferrin is taught to be a marker for various diseases related to inflammatory gastrointestinal disorders and colon cancer. Column 2 lines 46-59.

Lactoferrin was found to be the most stable substance in feces. Column 3 lines 10-11. Specifically a polyclonal antibody for lactoferrin (DAKOPATT) is employed to measure lactoferrin in inflammatory diarrhea specimens. Column 5 lines 57-61.

The method was performed in an enzyme-linked immunoassay format. A polyclonal antibody against lactoferrin (anti-human lactoferrin antibody) is immobilized onto wells of a 96-well polystyrene micro plate. The plate is contacted with diluted fecal specimen (column 11 lines 31-33 wherein 50Tl of sample is added to 100Tl %1BSA and TBS buffer) and detected with a polyclonal antibody labeled with alkaline phosphatase (anti-human-lactoferrin antibody). See column 11 example 2 and column 5 lines 14-19. The results were correlated to standards prepared with purified lactoferrin. Column 6 lines 13-19.

The assay results were detected at 510/630nm absorbance. Column 11 lines 53-56. Increased levels of lactoferrin were demonstrated to several diseases. See column 12-Results.

Uchida et al. disclose standard curve comparative analyses (claim 2). Healthy person fecal samples were run and graphed on a curve for comparison to unknown sample sets (standard curve). Column 7 lines 51-64 and column 8 lines 18-29.

Kit embodiments are also disclosed. The kit contains antibodies immobilized on a solid phase (micro plate), an enzyme linked antibody, and a chromogene (enzyme substrate for color development). See column 4 lines 1-9 and column 5 lines 36-40.

With respect to endogenous lactoferrin, it is noted that the lactoferrin detected by Uchida et al. were found within the patient (endogenous to the patient) and occurred as a result of disorders.

Normal patients exhibited very small amounts of lactoferrin (0.75 – 2.4Tg/g feces) and Uchida et al. taught that their method could be used in various types of lactoferrin (column 6 lines 58-61). Therefore absent evidence to the contrary Uchida et al. teach the detection of endogenous lactoferrin.

Uchida et al. do not specifically teach sample detection at 450nm. However, Uchida et al. teach that the absorbance measurement is routinely adjusted to optimize the assay. See column 5 lines 30-32. Absent evidence to the contrary the detection of the lactoferrin assay taught by Uchida et al. is routine optimization. It would have been obvious to one having ordinary skill in the art at the time of the invention was made to measure lactoferrin at a 450nm absorbance reading, since it has been held that discovering an optimal value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 F.2d 272, 205, USPQ 215(CCPA 1980).

Although Uchida et al. teach standard curve analysis of lactoferrin (quantification curve of figure 4, column 8 lines 47-48, column 11 lines 64-67; and reference value in column 4 lines 34-62), they do not specifically teach the measurement of lactoferrin within a determined linear portion of the standard curve.

However, Hoeyer discloses the theory of linear calibration in order to maximize precision of the obtained concentrations. See abstract.

It would have been prima facie obvious to one of ordinary skill in the art at the time of applicant's invention to detect lactoferrin concentrations as taught by Uchida within a linear portion of the standard curve as taught by Hoeyer because Hoeyer taught that this maximized the precision of the determined concentration. See Hoeyer – Abstract.

III. Claims 4 and 5 are rejected under 35 U.S.C.103(a) as being unpatentable over Uchida et al. (US Patent #5,552,292) in view of Boy Hoeyer (Dansk Kemi, 1994, 75(5), pages 26-28-Abstrcat Only) and further in view of Foster et al. (U.S. Patent#4,444,879).

Please see Uchida et al. in view of Boy Hoeyer as set forth above.

Although Uchida et al. in view of Boy Hoeyer teach the regents required by the claims, they do not specifically teach the inclusion of all the reagents in kit configurations (in particularly the purified human lactoferrin – taught in '292 column in column 6 lines 14-16 and stop solution or coloring reagent – taught in '292 column 5 line 29-30). In other words, the reference fails to teach all the reagents as a kit. However, kits are well known embodiments for assay reagents. Foster et al. (U.S. Patent #4,444,879) describe one example.

In their patent kits including the reactant reagents, a micro plate, positive controls, negative controls, standards, and instructions are taught. The reagents are compartmentalized or packaged separately for utility. See figure 6, and column 15, lines 10-34.

It would have been prima facie obvious to one of ordinary skill in the art at the time of applicant's invention to take the detection assay reagents as taught by Uchida et al. in view of Boy Hoeyer and format them into a kit because Foster et al. teach that it is convenient to do so and one can enhance sensitivity of a method by providing reagents as a kit. Further, the reagents in a kit are available in pre-measured amounts, which eliminates the variability that can occur when performing the assay. Kits are also economically beneficial in reagent distribution.

Response to Arguments

Applicant contends that the Uchida reference fails to teach or suggest all the limitations of the rejected claims.

Specifically applicant argues that Uchida measures the level of only whole-sized lactoferrin by immunoassay utilizing monoclonal antibodies. This argument was carefully considered but not found persuasive because Uchida discloses the detection of total lactoferrin (whole and half-sized) with a polyclonal antibody. Lactoferrin was measured by immunoassay utilizing polyclonal antibody (DAKOPATT, Denmark, referred to as DAKO). The results showed two types of lactoferrin; whole and half-sized. See column 5 lines 57 through column 6 line 2.

Further, the test for obviousness is not whether the features of one reference may be bodily incorporated into the other to produce the claimed subject matter but simply what the combination of references makes obvious to one of ordinary skill in the pertinent art. See, *In re Bent*, 52 CCPA 850, 144 USPQ 28 (1964); *In re Nievelt*, 179 USPQ 224 (CCPA 1973).

Applicant's arguments with respect to the measurement of lactoferrin against a standard curve have been considered but are not persuasive because Uchida teaches this limitation in column 11 line 64-66 for example.

The newly added limitations regarding the determination of lactoferrin within a linear portion of the curve have been addressed by the abstract to Boy Hoeyer.

Applicant contends that the rejections under 103(a) including Foster 4,444,879 should be withdrawn because of the deficiencies noted in Uchida et al. The deficiencies in Uchida et al. have been addressed above. Accordingly, the rejections are maintained.

6. For reasons aforementioned, no claims are allowed.

Remarks

7. Prior art made of record and not relied upon is considered pertinent to the applicant's disclosure:

A. Tabata et al. (Rinsho Byori, 1997, 45(12), 1201-1203 – Abstract Only) teach that lactoferrin is useful in monitoring inflammatory bowel disease.

B. Mathias et al. (Digestive Diseases and Sciences, June 1994, Vol.39, No.6, 1155-1162) disclose methods for assessing bowel disease detecting duplicate patient samples to allow for test drug assessment (leuprolide). See abstract and page 1160-Discussion.

8. Papers related to this application may be submitted to Group 1600 by facsimile transmission. Papers should be faxed to Group 1600 via the PTO Fax Center located in Crystal Mall 1. The faxing of such papers must conform to the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989). The Group 1641 – Central Fax number is (571) 273-8300, which is able to receive transmissions 24 hours/day, 7 days/week. In the event Applicant would like to fax an unofficial communication, the Examiner should be contacted for the appropriate Right Fax number.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lisa V. Cook whose telephone number is (571) 272-0816. The examiner can normally be reached on Monday - Friday from 7:00 AM - 4:00 PM.

Art Unit: 1641

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Long Le, can be reached on (571) 272-0823.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group TC 1600 whose telephone number is (571) 272-1600.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
